To begin with, the iPhone 5 may have taken a few design cues from its predecessor and made all of the glass and aluminum, but is now shrinking higher to accommodate a larger, 4-inch Retina display with a 16:9 aspect ratio. With touch technology in the screen cells so slim, sharper and less glare under direct sunlight and if that's not enough, the new display panel provides 44% better saturation supporting full sRGB display. At the same time Apple has managed to shave off quite a bit from the waist of the smartphone which is now just 7.6 mm thick which makes no doubt that the thinnest iPhone yet. Ultimately the iPhone has been blessed with a high-speed 4G LTE connection and can reach speeds of up to 100Mbps at least in theory as far as the smartphone provider is compatible with AT&T, Verizon, and Sprint LTE networks in the US. For people north of the border, Apple will release the iPhone 5 in partnership with Belle Rogers, Telus, Fido, Virgin Mobile and Coodo. That's what Apple has done by placing a brand new A6 processor inside the iPhone 5, which has a CPU that is twice as fast as the one within the A5 chip. Real Racing 3 has shown on stage showing off what eye candy the iPhone 5 can deliver. At the same time, the A6 is smaller and more energy efficient than the A5 above the screen on the new iPhone, the front camera is adjustable with the BSI sensor, which can now be used for FaceTime conversations in HD, opening the iPhone 5 around, and you'll find an 8-megapixel camera with a 5-element lens and a fast f/2.4 aperture, not much change in the camera department compared to the iPhone 4S, but that's not necessarily a bad thing, as we know that previous models can capture some pretty good shots. What's new from a technical point of view, however, is that the A6 chip now comes with improved image processing, which reduces digital noise in photos. In addition, the camera lens is now protected by a sapphire cover for better durability. On the software side, panorama mode has been added, and composite photos of up to 28 megapixels can be taken with the help of. This camera can use 1080p video at 30 frames per second, but Apple brags that it improves the video shake feature. Sound system. After all, still talk on their phones! Three microphones are available on the iPhone 5 to reduce noise during a call and to capture clear sound while shooting video. The speaker has 5 magnetic transducers for better performance. There is also what is called a wideband audio, which should make it sound more natural during a conversation, even if it is a feature that providers must support to make it work. At this time at least 20 carriers will support the standard as it was predicted, the new iPhone sported a smaller, redesigned dock connection called Lightning, which is used for charging and connecting smartphones to computers. In case it bothers you However, Apple will offer an adapter that makes the old 30-pin connector compatible with the new configuration. The new connector is reversible, which means it doesn't matter which direction it is plugged in. As boss side observations, JBL, Bowers & Wilkins, Bang & Olufsen and other companies are preparing audio devices compatible with the new dock there may be speculation as to how good the battery life of the new iPhone will be, but Apple promises satisfactory results with the iPhone 5. The icing on the cake is the iOS 6, which the iPhone 5 will ship with. Simply put, you can expect about 200 new features to be available with the iPhone 5, including some key ones like Apple's new 3D maps with turn-by-turn navigation, deep Facebook integration, FaceTime via mobile phone and much more. No wonder the fifth row of icons has been added to the interface and applications such as iWork, Keynote, Pages, Numbers have been updated to make the software take full advantage of additional real estate rendering. However, existing applications will run letterboxed until they are updated, so how can I get one? Well, one way to buy an iPhone 5 is to pre-order from the Apple online store on September 14th, but in case you have patience, buying from apple brick and mortar stores is also an option. Smartphones will hit shelves on Friday, September 21 in the US, Canada, The United Kingdom, Germany, France, Australia, Japan, Hong Kong and Singapore. Pricing is set at \$199 on the contract for the 16GB model, the 32GB will cost you \$100 more and \$399, will you have 64GB of storage on board, the iPhone 5 will be available in white or black - white format with raw aluminum back, while the black one sports anodized coating pad too? You might then want to consider getting an iPhone 4S, which will be reduced to \$99 in contracts, or the iPhone 4, which is offered for free with a 2-year service agreement. Photo courtesy of Apple The press crept to an all-time high when investors held their collective breath to see if the iPhone XS and iPhone XR would kickstart their stalled iPhone sales. Smartphone sales are falling globally and Apple is far from immune. On November 1 the company took the step of announcing it would not report sales of its unit of iPhones experts believed it was due to flat or declining iPhone sales, prompting a drop in Apple shares. Something of a change and it was bad news for In January, Apple reported that first-quarter holiday revenue fell since 2001 on the back of a 15% annual iPhone sales slide, dipping again in the second quarter as the company discounted iPhones in an effort to boost sales to unease investors. The announcement he was leaving Apple. The next iPhone used to refer to other companies with products that had the potential to change the face of the technology and send soaring stocks to the moon. But now, Apple is in its own iPhone search. Next to deal with the very real slump in smartphones of change. So, what is Apple's next iPhone – or does such a thing exist? We'll look at current Apple products, as well as other future launches with the prospect of opening AAPL shares over the next decade, to determine whether any of them have the potential to replicate the success of the smartphone juggernaut. These include apple music membership, Apple Pay and iTunes rental moves, as well as new deals announced earlier this year: Apple Card,
